My highest score was 2052. I won several tournaments and was in 2013 Italian champion in blitz category (under 2000). Playing chess makes me feel alive. I'm not a great scholar nor a great theory player, but chess is art, I feel a great joy in creating a winning combination. Chess only gives adrenaline.

The reason why I'm in love with chess is that there is no luck in it, like in other board games. Both sides are equal in the beginning, and for me chess is a mix between science and art.

You have to have a creative mind and an absolute knowledge of what you are doing on the board.

Daiy Karwan Ahmed

I am not a chess aficionado but I enjoy the game . I am looking forward to teaching it to a special person who has expressed interest in learning it.

Chess takes me into a different world and I just see life through the board.

It's great, even when I lose, because I learn something with every loss.

I will always love, remember and respect the people who taught me the game.

I was taught when I was 8 so it would have taken considerable patience on their behalf to teach me properly. It became a bonding activity between my father and me, so that was a big influence on how I feel about the game.

Two men taught me chess: one was my father and the other was a neighbour who decided that if an 8 year old misfit girl wanted to learn the game then he would teach her everything he knew. He spent hours with me over the board and he played hard so I would always know what it felt like to face a true opponent. He and my dad let me watch them play one another. It all did wonders for my self esteem.

D'Arc Veronika

Chess, to me, is not just a game.

I'm very competitive and chess lets me pit my cognitive ability against another's, while also allowing me to test myself.

I started playing chess when I was 6 years old. This game was so different and doesn't need power.

First I started with my mother (she was my teacher), but she didn't take long to beat.

Later I played my cousins. They were good for me but I was loving chess, so I won against them. My father, he was thinking so much. I learned to think with my father. I beat him too. My old cousin had 1600 UKD and 1600 elo, he was so good. But I won against him too. I won against everybody in my neighborhood. I was bored. And...

I discovered online chess and I understood that I'm not good.

I was playing chess online all time.

I developed so much. I was champion in Hopa and in Giresun. I won against Ebru Kaplan. She was 3. In Turkey (woman). But I'm not IM, FM or GM. I'm just good player. Because I have no coach.

If you want to be a good player you need a good coach. I didn't have, but I'm chess teacher now. I help people as much as I can. It was my chess history.

Chess is one of the oldest games, a game for centuries, and it's hard to write something new on this subject. The simplest is to say that chess is like our life. Sadness after failure and defeat, joy after success and victory, happiness and tension when planning, action, attack until the withdrawal of the defense that we finally bring safety.

In chess, it does not matter if you're young or old, what is your religion, colour, nation.

Chess is inherited treasure for all of us that we must preserve for future generations.

As I said at the beginning, chess is life.

The next best game is bridge.

Although luck plays a major role, skill can compensate for this flaw.

Chess is an amazing, rich, and complex game.

I think it wouldn't be an understatement to say that getting back into tournament chess in the middle of 2016 has changed my life.

I am an active player and teacher at the moment. Perhaps one day I'll start a YouTube channel with game commentary, or help direct tournaments when I am no longer active player. I have learned the following as a chess player that I like: Chess teaches discipline and you are rewarded for hard work both on and off the board. If you get lazy, your results suffer. If you neglect an aspect of your game (i.e. the opening), opponents will figure this out and you'll be punished for it!

Chess allows one to be creative, and each player can develop their own unique style. In tense situations, the player with stronger nerves usually wins.

Winning and losing (and drawing) are part of the game, and strong players know that they need to learn something from each and every one of their games, no matter the result.

On a personal level Chess is a game I enjoyed because it was challenging and I was reasonably good at it.

I always felt there was more to learn about it every time I played, and still do to this day.

I often liken it to an exam where you take turns at setting and answering questions.

As a boardgame I think chess has hit the sweet spot between complexity and mastery.

The size of the board and the variety of pieces seems pretty balanced to me, meaning most people know how to improve, even if we can't always get to the level we want.
